

What's New in Version 12.4?

300% faster charts & data. It will spoil you.

Float any window outside of the main program. Works on one monitor or multiple monitors. Keep your favorite charts, scans and watchlists open at all times. Easily move tools back and forth between layout windows.

Plot and overlay **multiple graphs** on same chart.

Peter Worden's notes & reports put **trading ideas and chart setups** at your fingertips throughout the day.

Graph **25 years of historical earnings**, sales, dividends and dozens of other fundamental criteria. It's the most complete company picture ever.

Create **indicators based on any data** on the chart - even indicators of indicators.

Upgraded pointer moves fluidly across multiple chart windows to quickly identify every plot & indicator at the exact same point in time. Even works across multiple time frames.

Drag pointer between any two points on the chart to **measure performance & annualized return**.

Overlay **streaming real-time Morningstar® Sector & Industry Indexes**. Use on both intraday & long-term charts for unmatched comprehension of market action.

Improved workflow for rearranging chart panes and **overlying graphs**.

NEW Press the **forward slash "/" short-cut** to browse and plot data by category: **(1)** indicators **(2)** fundamentals **(3)** sectors & industries **(4)** indexes **(5)** T2 market indicators **(6)** ETF's **(7)** FOREX pairs **(8)** formulas **(9)** stocks

Improved alert management.

Plot or monitor **T2 market breadth indicators** in streaming real-time. Includes A/D lines, McClellan Oscillator, Zweig Breadth Thrust, Bolton-Tremblay, # New Highs, % Stocks Above Moving Average and **25 more powerful market timing indicators** to keep your finger on the pulse of the overall market conditions.

Apply **technical indicators to anything including historical fundamentals**, sectors, industries and T2 market indicators. Any indicator you create can be instantly applied to an alert, scan or sort.

New **related items** window shows you everything that would interest you based on the stock you are viewing. It automatically pulls up companies in the same sector & industry, or holdings of an ETF or components of a market index. Also displays which it hold any particular stock. It is an ultra-efficient cross referencing tool.

Automatically remembers your window layout configurations across multiple computers making program start-up fast & convenient from any location. **Fully compatible with multiple monitors**.

New streaming real-time calculations for industry composite volume. **Sort industries** based on their total trading activity or trending trading activity for a quick real-time market summary of where the money is flowing.

Program runs on a **Mac, in Windows or inside any web browser**.

All references to "real-time" require Platinum service. Gold service is streaming 15-minute delayed.
